Part I: Clearance of Civil Aircraft

1	Introduction	3
	Anders Hansson, Andreas Varga	
1.1	Background	3
1.2	The COFCLUO Project	7
1.3	Outline of the Book	8
	References	9
2	Clearance Benchmark for a Civil Aircraft	11
	Guilhem Puyou, Yannick Losser	
2.1	Introduction	11
2.1.1	Nonlinear Benchmark	12
2.1.2	Integral Benchmark	12
2.2	Description of Flight Control Laws	13
2.2.1	Flight Control Laws Philosophy	14
2.2.2	Longitudinal Axis	15
2.2.3	Lateral Axis	16
2.3	The Nonlinear Benchmark Model	17
2.3.1	Flight Envelopes	17
2.3.2	Pilot Inputs and Pilot Model	18
2.3.3	Actuators and Sensors	19
2.3.4	Flight Mechanics	19
2.3.5	Control Laws	22
2.4	Clearance Criteria for the Nonlinear Benchmark	23
2.4.1	Un-piloted Aircraft Stability	23
2.4.2	Manoeuvrability Requirements for the Longitudinal Axis	25
2.4.3	Flight Domain Protection	26
2.5	The Integral Benchmark Model	27
2.5.1	Flexible Aircraft Model	28

2.5.2	Mass Configurations and Flight Points	29
2.6	Clearance Criteria for the Integral Benchmark	30
2.6.1	Aeroelastic Stability	30
2.6.2	Stability Margins	31
2.6.3	Comfort with Respect to Turbulence	31
2.7	Current AIRBUS Practices	32
2.7.1	Validation Methods	32
2.7.2	Validation Means	34
2.7.3	Validation Coverage	35
2.8	AIRBUS Expectations	36
	References	36

Part II: Generation of Linear Uncertain Models

3	Generation of LPV Models and LFRs for a Nonlinear Aircraft Model	39
	Simon Hecker, Harald Pfifer	
3.1	Introduction	39
3.2	Basic Procedure for the Generation of LPV Models	41
3.2.1	Specification of Known Relations	42
3.2.2	Element-Wise Significance Check	42
3.2.3	Multivariable Polynomial Fitting	43
3.2.4	Full Rank Basis Reduction	45
3.3	Optimisation of the Linear Parameter Varying Model	46
3.3.1	Optimisation with ν -Gap Metric Constraint	47
3.3.2	Optimisation of the Polynomial Coefficients	47
3.4	Application to the COFLCUO Nonlinear Aircraft Model	48
3.4.1	The Aircraft Model	48
3.4.2	Trimming and Linearisation	49
3.4.3	Generation of an LFR for the Actuator Model and the Sensor Model	51
3.4.4	Generation of LPV Models and LFRs for the Flight Dynamics Model	52
3.4.5	Validation of the LPV Models and LFRs of the Flight Dynamics Model	54
3.5	Conclusion	56
	References	56
4	Generation of LFRs for a Flexible Aircraft Model	59
	Clément Roos	
4.1	Introduction	59
4.2	Problem Statement	60
4.2.1	Description of the Reference Models	60
4.2.2	LFT Modelling Objective	61
4.2.3	Challenging Issues	62

4.3	Description of the Method	62
4.3.1	Generation of Reduced and Consistent Models	63
4.3.2	Polynomial Interpolation and LFT Modelling	66
4.3.3	Special Case of a Coarse Grid	67
4.3.4	Low Order LFR Generation Procedure	68
4.4	Numerical Results	69
4.4.1	Construction of the LFR	70
4.4.2	Validation on the Grid	72
4.4.3	Validation on the Whole Continuous Domain	72
4.4.4	Evaluation of the Low Order LFR Generation Procedure	75
4.5	Conclusion	76
	References	77
5	Generation of LFRs for a Nonlinear Controller and Closed-Loop Aircraft Models	79
	Carsten Döll, Fabien Lescher, Clément Roos	
5.1	Introduction	79
5.2	Description of the Nonlinear Controller	80
5.3	Generation of the Controller LFRs	84
5.3.1	LFRs for Parameter Varying Gains	85
5.3.2	LFRs for Saturations and Rate Limiters	87
5.3.3	LFRs for Nonlinear Input/Output Relations	89
5.3.4	LFRs for the Overall Nonlinear Controller	91
5.4	Generation of the Closed-Loop LFR	96
5.4.1	Closed-Loop LFRs for the Nonlinear Model Performance Analysis	96
5.4.2	Closed-Loop LFRs for the Nonlinear Model Stability Analysis	99
5.4.3	Closed-Loop LFRs for the Flexible Model Stability and Performance Analysis	100
5.5	Evaluation of the LFR Generation Process	101
5.5.1	Evaluation of the LFR of the Nonlinear Controller	101
5.5.2	Evaluation of the Closed-Loop LFR	103
5.6	Conclusions	107
	References	108
6	Identification of LPV State-Space Models Using \mathcal{H}_2-Minimisation	111
	Daniel Petersson, Johan Löfberg	
6.1	Introduction	111
6.2	\mathcal{H}_2 -Minimisation	113
6.2.1	Important Property of \mathcal{H}_2 -Minimisation	114
6.2.2	Rewriting the \mathcal{H}_2 -Norm of the Error System	115
6.3	Method 1: General Nonlinear Optimisation	116

6.3.1	Evaluation of the Cost Function	116
6.3.2	Evaluation of the Gradient	118
6.4	Method 2: Semidefinite Programming	120
6.5	Regularisation of the Optimisation Problem	122
6.6	Examples	123
6.6.1	Academic Example	123
6.6.2	Application Example	126
6.7	Conclusions	127
	References	128

Part III: Analysis Techniques and Tools

7	Enhanced μ-Analysis Techniques for Clearance	131
	Jean-Marc Biannic, Clément Roos	
7.1	Introduction	131
7.2	Problem Statement and Preliminary Results	132
7.2.1	Introduction to μ -Analysis	132
7.2.2	Validity of the Scaling Matrices	134
7.3	Computation of a Guaranteed Robustness Margin	136
7.3.1	Standard Version of the Algorithm	136
7.3.2	Extension to Modal Performance Analysis	137
7.4	Computation of a Guaranteed Stability Domain	138
7.4.1	Standard Version of the Algorithm	138
7.4.2	Computation of the μ -Sensitivities	140
7.4.3	Other Algorithmic Variants	140
7.5	Connection with Clearance of Flight Control Laws	141
7.5.1	Eigenvalue Criterion	141
7.5.2	Stability Margin Criterion	142
7.6	Conclusion	145
	References	146
8	Worst-Case Parameter Search Based Clearance Using Parallel Nonlinear Programming Methods	149
	Hans-Dieter Joos	
8.1	Introduction	149
8.2	Theoretical Basis	150
8.2.1	Formulation as Global Optimisation Problem	150
8.2.2	Level of Confidence	151
8.2.3	Clearance Strategy	151
8.2.4	Transformation of Parameter Space	152
8.3	Applied Optimisation Methods	153
8.4	Parallel Computation	155
8.5	Conclusions	157
	References	158

9	Lyapunov-Based Robustness Analysis Techniques for Clearance	161
	Andrea Garulli, Alfio Masi, Simone Paoletti, Ercüment Türkoğlu	
9.1	Introduction	161
9.2	Robustness Analysis Using Lyapunov Functions	163
9.2.1	Problem Statement in LFR Framework	163
9.2.2	Wang-Balakrishnan Relaxations	164
9.2.3	Fu-Dasgupta Relaxations	165
9.2.4	Dettori-Scherer Relaxations	167
9.2.5	Special Case: Affine Parameter-Dependent Systems	168
9.3	Clearance of Flight Control Schemes	169
9.3.1	Aeroelastic Stability Criterion	169
9.3.2	Un-piloted Stability Criterion	170
9.3.3	Partitioning of the Uncertainty Domain	171
9.3.4	Gridding	171
9.3.5	A Graphical User Interface for Robust Stability Clearance Problems	172
9.4	Numerical Example	173
9.5	Conclusions	177
	References	177
10	IQC-Based Analysis Techniques for Clearance	179
	Christos Papageorgiou, Rikard Falkeborn, Anders Hansson	
10.1	Introduction	179
10.2	Analysis of Robust Stability and Robust Performance Using IQCs	180
10.2.1	Parametrized and Multiple IQCs	182
10.2.2	Verifying the Robust Stability Condition	184
10.3	Stability Margins Clearance with IQCs	185
10.3.1	Specifying Nichols Exclusion Regions	185
10.3.2	Lower Bound Calculation	188
10.3.3	Formulation of the Perturbed Stability Margin Problem	190
10.4	Formulation of the Comfort Clearance Criterion Using IQCs	192
10.4.1	State-Space Formulation of the Comfort Criterion	192
10.4.2	Robust \mathcal{H}_2 Performance Analysis Using IQCs	193
10.5	Preliminary Steps of the Analysis Algorithms	198
10.6	Conclusion	200

11 Nonlinear Programming Methods for Worst-Case Pilot Input Determination	203
Daniel Skoogh, Fredrik Berefelt	
11.1 Introduction	203
11.2 Optimisation-Based Search of Worst-Case Pilot Inputs . . .	205
11.2.1 Definition of Clearance Criteria	205
11.2.2 Parametrization of Pilot Signals	205
11.2.3 Definition of Optimisation Problem	205
11.3 Local Optimisation Methods	207
11.3.1 Pattern Search	207
11.3.2 Cyclic Coordinate Descent Method	208
11.3.3 Quasi-Newton Method	209
11.4 Global Optimisation Methods	210
11.4.1 Genetic Algorithms	210
11.4.2 Differential Evolution	212
11.4.3 Evolution Strategies	213
11.4.4 Dividing Rectangles Method	214
11.5 Conclusions	215

 Part IV: Analysis Results	
12 Application of μ-Analysis Techniques to Clearance	221
Clément Roos, Jean-Marc Biannic	
12.1 Introduction	221
12.2 Analysis of the Eigenvalue Criterion	222
12.2.1 Direct Application of the Analysis Method and Variations	222
12.2.2 Influence of the Shape of the Initial Domain	224
12.2.3 Evaluation of Conservatism	226
12.2.4 Stability with Respect to the Boundary of a Truncated Sector	227
12.2.5 Application to Systems with Highly Repeated Parameters	229
12.3 Analysis of the Stability Margin Criterion	230
12.4 Conclusions and Future Perspectives	231
Reference	232
 13 Application of Parallel Nonlinear Programming Methods for Worst-Case Parameter Search	233
Hans-Dieter Joos	
13.1 Introduction	233
13.2 Simulation Based Clearance Criteria	234
13.2.1 Low Speed Manoeuvrability Criterion	234

13.2.2	Load Factor Protection: Longitudinal Manoeuvre	240
13.2.3	Load Factor Protection: Lateral Manoeuvre	244
13.3	Performance Comparison of Optimisation Methods	249
13.4	Computation Times	250
13.5	Summary	251
	References	252
14	Applications of Lyapunov-Based Analysis Techniques for Clearance	253
	Andrea Garulli, Alfio Masi, Simone Paoletti, Ercüment Türkoğlu	
14.1	Introduction	253
14.2	Results on Aeroelastic Stability Criterion	254
14.2.1	LFR Models for Aeroelastic Stability	254
14.2.2	Robustness Analysis by Progressive Tiling	256
14.2.3	Robustness Analysis by Adaptive Tiling	259
14.2.4	Discussion	261
14.3	Results on Un-piloted Stability Criterion	262
14.3.1	LFR Models for Un-piloted Stability	262
14.3.2	Robustness Analysis Results	263
14.4	Robustness Analysis of Affine Parameter-Dependent Models	272
14.5	Conclusions	273
	References	275
15	Applications of IQC-Based Analysis Techniques for Clearance	277
	Ragnar Wallin, Sina Khoshfetrat Pakazad, Anders Hansson, Andrea Garulli, Alfio Masi	
15.1	Introduction	277
15.2	Coping with Computational Complexity	279
15.2.1	Choice of IQCs	279
15.2.2	Partitioning of the Parameter Space	281
15.2.3	Model Reduction	281
15.3	Stability Analysis of the Nonlinear Rigid Aircraft Model	282
15.3.1	Analysis of Robust Linear Stability for Nominal Centre of Gravity Position	283
15.3.2	Analysis of Robust Nonlinear Stability	292
15.4	Loads and Comfort Criterion	293
15.4.1	Computational Times	294
15.4.2	Level of Conservatism	294
15.5	Conclusions and Future Research	296

Part V: Industrial Evaluation

17 Evaluation of Clearance Techniques in an Industrial Context	319
Guilhem Puyou, Rafael Fernandes de Oliveira, Adrien Berard	
17.1 Overview of Basic Methods	319
17.1.1 Enhanced μ -Analysis Techniques	319
17.1.2 Convex Relaxations	321
17.1.3 IQC-Based Analysis Techniques	322
17.1.4 Worst-Case Search-Based Methods	322
17.2 Methods, Criteria and Models	324
17.2.1 Techniques Mapping	324
17.2.2 LFR Review	324
17.3 Straightforward Applications of LFR Based Methods	330
17.3.1 Baseline Solution	330
17.3.2 Enhanced μ -Analysis Techniques	331
17.3.3 Convex Relaxations	333
17.3.4 IQC-Based Analysis Techniques	335
17.3.5 Discussion	336
17.4 Straightforward Applications of Worst-Case Search-Based Methods	337
17.4.1 Baseline Solution	338
17.4.2 Comparisons with the Baseline Solution	340
17.5 Industrial Application of Worst-Case Search-Based Methods	342
17.5.1 Coupling of Optimisation and Simulation Model	342
17.5.2 Benchmark: Worst-Case Pilot Input	343
17.5.3 Enhancements	347
17.5.4 Proposed Validation Workflow	354

17.6	Conclusion	356
